

Few-Body physics with ultracold K and Rb: Efimov physics and the Bose polaron

Dual species quantum gases with tunable interactions

HETERONUCLEAR EFIMOV PHYSICS

Three identical bosons

Three non-identical bosons

$^{39}\text{K} + ^{87}\text{Rb}$

Polaron physics

L. D. Landau

S. I. Pekar

Technologically important semiconductors

Superconductors

Electrons in solids

Formation of quasiparticle: **Polaron**

OUTLINE

- Motivation
- **Quantum gases with tunable interactions**
- Efimov physics in K-Rb mixtures
- Disappearance of Efimov resonances in K
- The Bose polaron
- Conclusion

EXPERIMENTAL SEQUENCE

Selective cooling of Rb \longrightarrow Sympathetic cooling of K

Wacker *et. al.* Phys. Rev. A **92**, 053602 (2015)

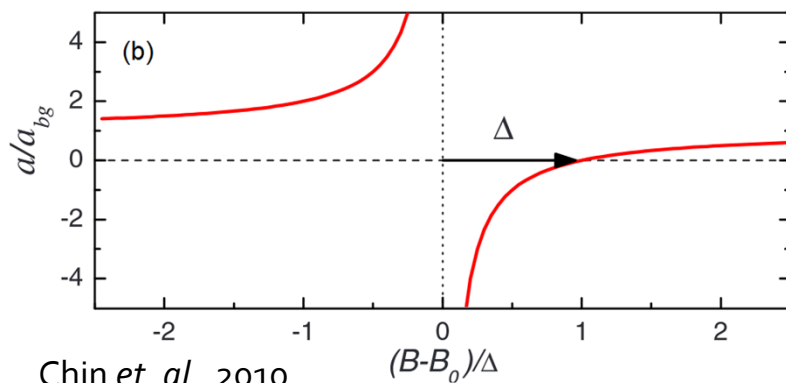

FESHBACH RESONANCES IN ULTRACOLD GASES

$$a(B) = a_{bg} \left(1 - \frac{\Delta}{B - B_0} \right)$$

Applications:

- BEC formation
- control mean field interaction
- associate molecules
- Efimov physics

Chin *et. al.* 2010

BOSE-EINSTEIN CONDENSATION

FESHBACH RESONANCES

K-Rb inter species resonance

$$|F=1, m_f=-1\rangle$$

K-K inter state resonance

$$|F=1, m_f=-1\rangle + |F=1, m_f=0\rangle$$

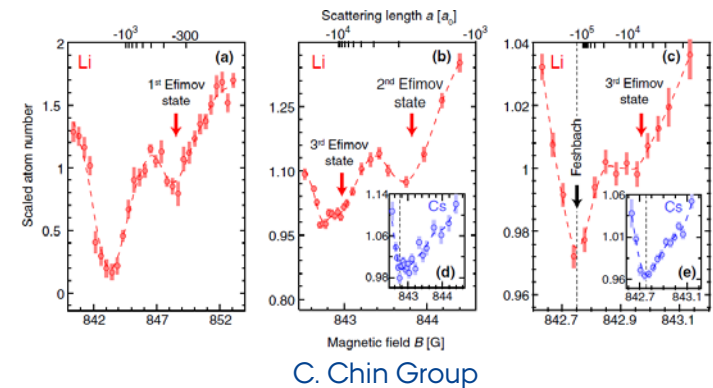

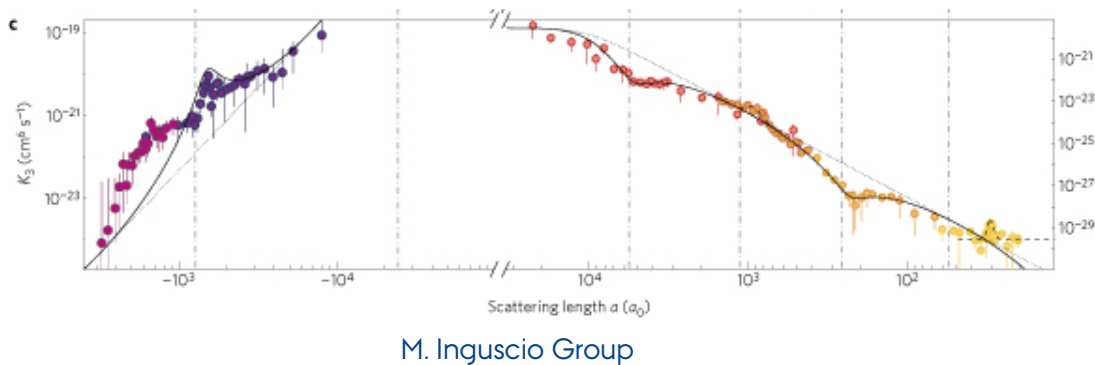

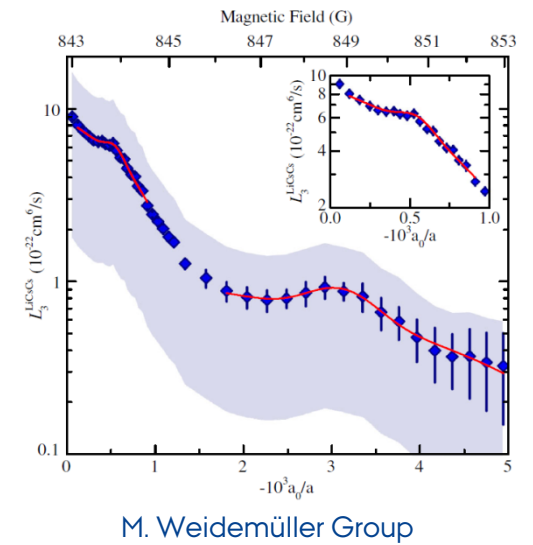

Lysebo, M., and L. Veseth. Phys. Rev. A **81**. 032702 (2010).

OUTLINE

- Motivation
- Quantum gases with tunable interactions
- **Efimov physics in K-Rb mixtures**
- Disappearance of Efimov resonances in K
- The Bose polaron
- Conclusion

EFIMOV PHYSICS – EXAMPLES OF UNIVERSALITY

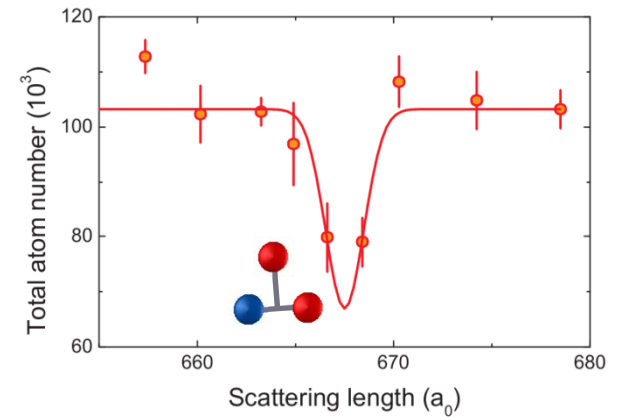

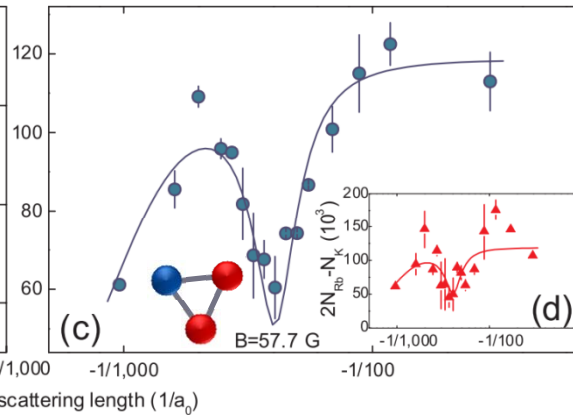

HETERONUCLEAR EFIMOV PHYSICS

Three identical bosons

Three non-identical bosons

Barontini *et. al.* 2009

HETERONUCLEAR EFIMOV PHYSICS

Three non-identical bosons

Barontini *et. al.* 2009

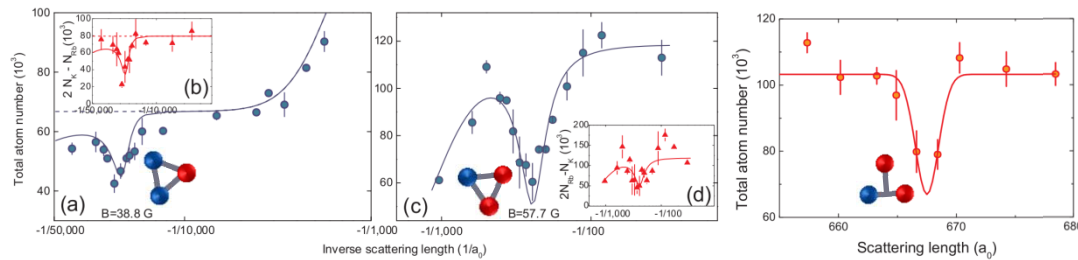

Bloom *et. al.* 2013

HETERONUCLEAR EFIMOV PHYSICS

Three non-identical bosons

Barontini *et. al.* 2009

Bloom *et. al.* 2013

$^{39}\text{K} + ^{87}\text{Rb}$ system

One more isotope to study!

HETERONUCLEAR EFIMOV PHYSICS

Efimov physics are explored by studying decay rates at various interactions

LOSSES IN MIXTURES

$$\frac{dN_{\text{Rb}}}{dt} = -\frac{2}{3}\alpha_{\text{RbRbK}} \int n_{\text{Rb}}^2 n_{\text{K}} d^3r$$

$$-\frac{1}{3}\alpha_{\text{RbKK}} \int n_{\text{Rb}} n_{\text{K}}^2 d^3r$$

$$-\alpha_{\text{RbRbRb}} \int n_{\text{Rb}}^3 d^3r$$

$$-\frac{1}{\tau_{\text{Rb}}} \int n_{\text{Rb}} d^3r$$

$$\frac{dN_{\text{K}}}{dt} = -\frac{1}{3}\alpha_{\text{RbRbK}} \int n_{\text{Rb}}^2 n_{\text{K}} d^3r$$

$$-\frac{2}{3}\alpha_{\text{RbKK}} \int n_{\text{Rb}} n_{\text{K}}^2 d^3r$$

$$-\alpha_{\text{KKK}} \int n_{\text{K}}^3 d^3r$$

$$-\frac{1}{\tau_{\text{K}}} \int n_{\text{K}} d^3r$$

Heating: $\frac{dT}{dt} = \frac{\alpha T}{3N} \int n^3 d^3r$ (single species)

Well known: $\alpha_{\text{RbRbRb}}, \alpha_{\text{KKK}}$

Use: $\alpha_{\text{RbRbK}} \gg \alpha_{\text{RbKK}}$

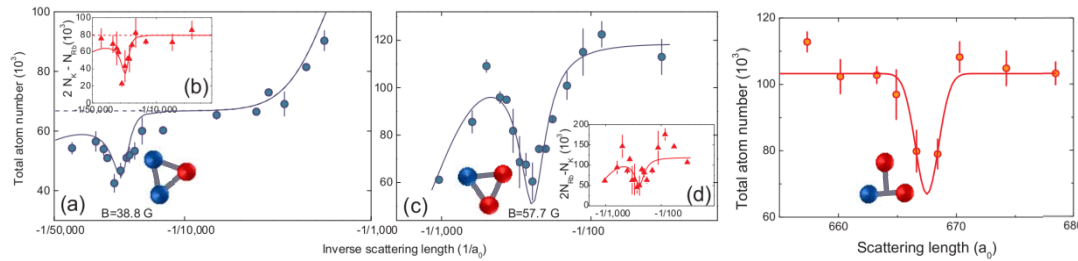

Solve and fit differential equations:

Extract: α_{RbRbK}

HETERONUCLEAR EFIMOV PHYSICS

Three non-identical bosons

^{41}K

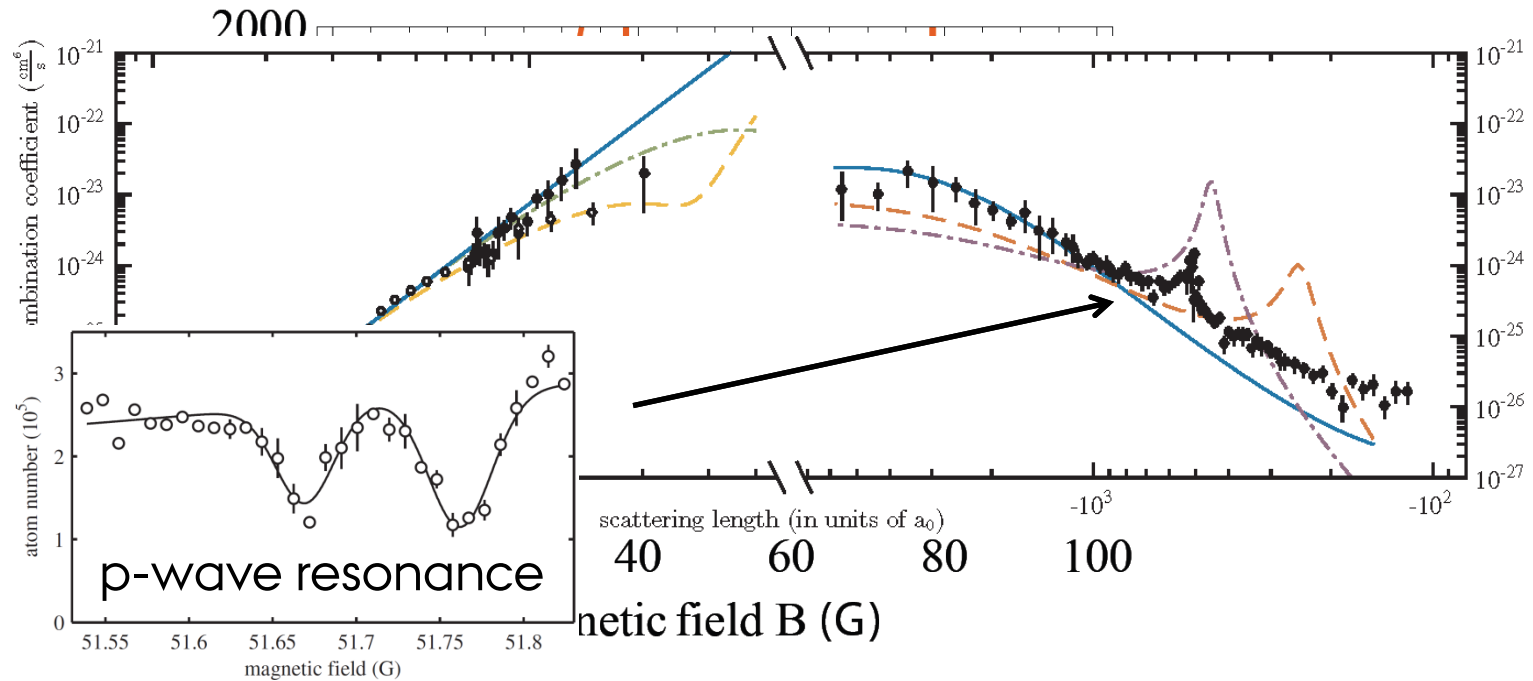

^{87}Rb

HETERONUCLEAR EFIMOV PHYSICS

$|F = 1, m_F = 1\rangle$

Target state: $|F = 1, m_F = 1\rangle$

HETERONUCLEAR EFIMOV PHYSICS

No observable Efimov resonances!

$^{41}\text{K} + ^{87}\text{Rb}$

No observable Efimov resonances!

$^{40}\text{K} + ^{87}\text{Rb}$

Bloom *et. al.* 2013

No observable Efimov resonances!

$^{39}\text{K} + ^{87}\text{Rb}$

CONCLUSION AND OUTLOOK

- No observable atomic Efimov resonances in KRb below $2000 a_0$
- Restores universality
- Find ^{39}K - ^{87}Rb dimer resonance

L. J. Wacker, N. B. Jørgensen, D. Birkmose, N. Winter, M. Mikkelsen, J. Sherson, N. Zinner, and J. J. Arlt
Phys. Rev. Lett. **117**, 163201 (2016)

OUTLINE

- Motivation

- Efimov physics in K-Rb mixtures
- **Disappearance of Efimov resonances in K**
- The Bose polaron
- Conclusion

EFIMOV PHYSICS IN ^{39}K

M. Inguscio Group

EFIMOV RESONANCE REGIONS

AIMS

- Observation of second Efimov resonance
- Test of universality at adjacent Feshbach resonances

EXPERIMENTAL SEQUENCE

^{39}K BEC

$T = 42$ nK

$a_{\text{max}} = 25782 a_0$

ANALYSIS OF FIRST RESONANCE

$$N(t) = \frac{N_0}{\left(1 + \frac{3\beta^2 N_0^2}{\sqrt{27} T_0^3} K_3 t\right)^{1/3}}$$

$$T(t) = T_0 \left(1 + \frac{3\beta^2 N_0^2}{\sqrt{27} T_0^3} K_3 t\right)^{1/9}$$

$$\beta = (m\bar{\omega}^2 / 2\pi k_B)^{3/2}$$

S. Roy et al., Phys. Rev. Lett. **111**, 053202 (2013)

Good agreement of experimental results at $T=100\text{nK}$

ANALYSIS OF SECOND RESONANCE

Surprises:

1. No clear second resonance
2. First resonance is extremely weak

T DEPENDENCE OF FIRST RESONANCE

- 80nK
- 120nK
- 250nK
- 500nK

TEMPERATURE DEPENDENCE

- No decrease of recombination rate in theory (N. Zinner)
- Is something missing from theory?
- Is the measurement suitable?

OUTLINE

- Motivation
- Quantum gases with tunable interactions
- Efimov physics in K-Rb mixtures
- Disappearance of Efimov resonances in K
- **The Bose polaron**
- Conclusion

Polarons in ultracold gases

Polaron
in a solid

Ultracold gases

- High purity
- High flexibility
- Tunable interactions

Energy of the polaron

Polarons in ultracold gases

Feshbach resonances provide tunable interactions

Energy of the polaron

Polarons in ultracold gases

Feshbach resonances provide tunable interactions

Energy of the polaron

Polarons in ultracold gases

What about bosons?

The Bose polaron

Stronger parallel to solid state physics
(phonons are bosons)

Three-body physics enter!

Lifetime
 $\propto n^2 a^4$

Is the polaron even well defined?

The Bose polaron – Our approach

Single component ^{39}K BEC in state

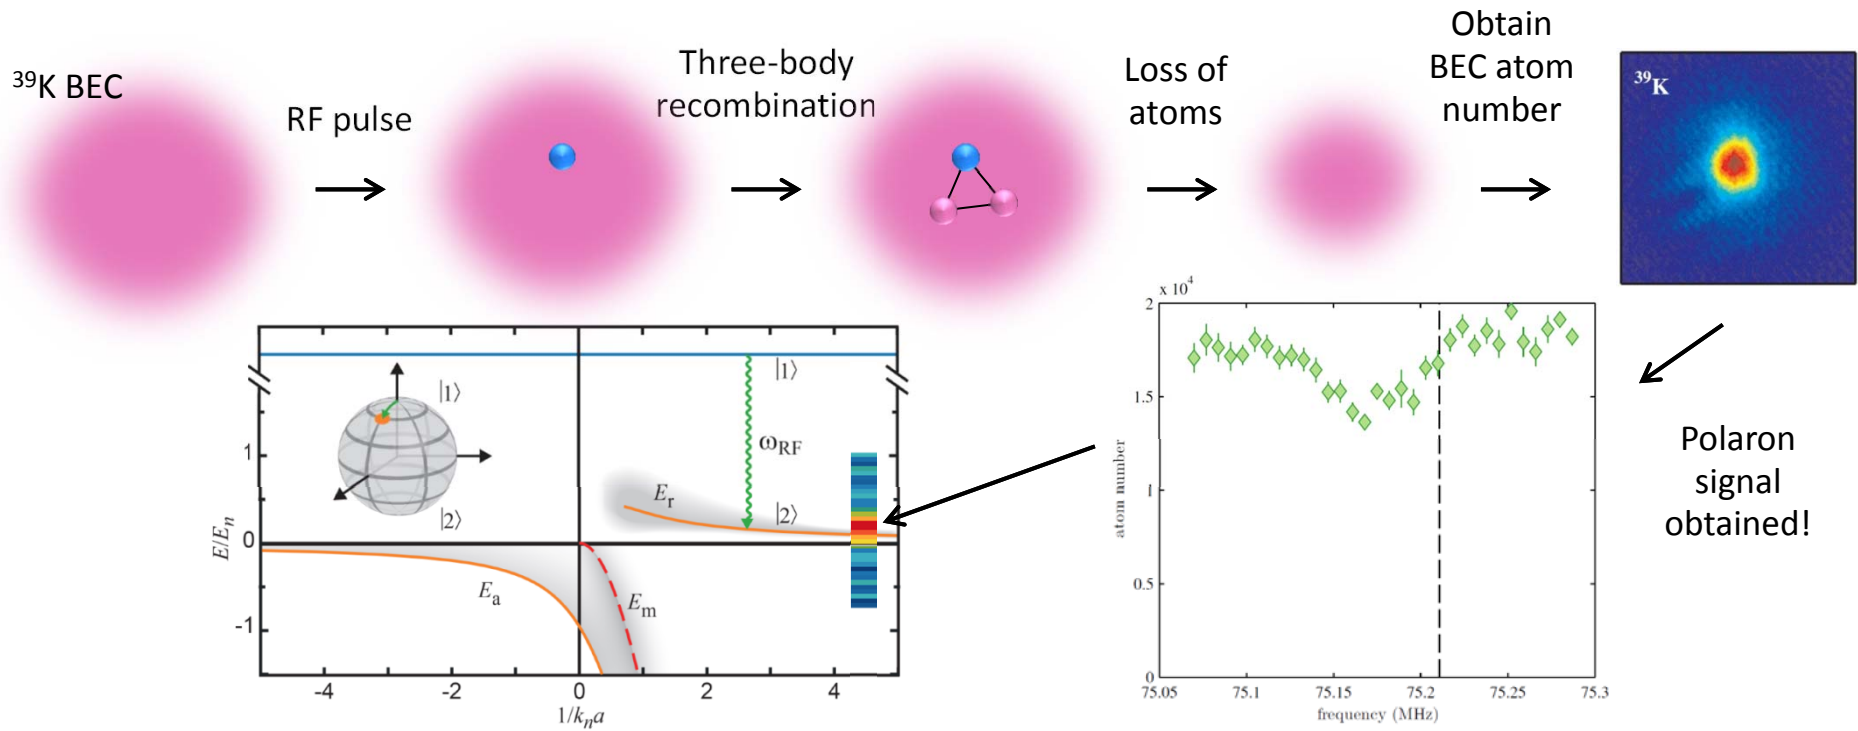

Requires Feshbach resonance *between* two hyperfine states

Lysebo, M., and L. Veseth. Phys. Rev. A **81**. 032702 (2010).

Experimental procedure

Polaron spectrum

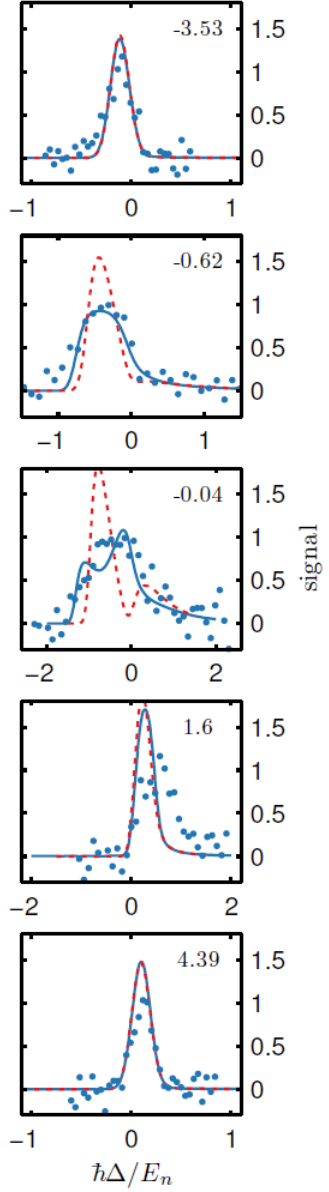

Repulsive polaron

Variational theory including:

- Density distribution
- Finite pulse length
- Three-body correlations

Quantitative analysis

Average energy

Signal width

Polaron well-defined
and long lived!

Variational theory including:

- Density distribution
- Finite pulse length
- Three-body correlations

- Does **not** include three-body recombination

Conclusion and Outlook

- First observation of the repulsive and attractive polaron in a BEC
- Excellent agreement with theory
- The polaron is long-lived
- Quantum impurities can now be studied in a bosonic environment systematically!

- How does temperature affect the polaron?
- What is the quasiparticle residue of the polaron?
- Dynamical behaviour of the polaron?
- Which role does Efimov physics play?
