

The Palomar Transient Factory: Cadence and expected discovery rate

Avishay Gal-Yam, Caltech and the Weizmann Institute

For the PTF collaboration

Caltech, Columbia, IPAC, LBL+Yale, LCOGT, Weizmann

CFH, PSU

The Palomar Transient Factory

There is nothing like searching, if you want to find something.

You usually find something, if you search,
but it is not always quite the something you were after.

Thorin Oakenshild

The PTF

PTF is dedicated project to identify variable objects and transients

Uniqueness: high cadence

Large sky coverage obtained by single band discovery

Classification of candidate via 3-band photometry

Palomar 60-inch (50% of dedicated time)

MDM, Wise, LCOGT, Etc.

Three types of surveys:

1-night, 3-night and SN-optimized

Science goals

- SNe: Ia and core-collapse

- Transients: Novae, Luminous red novae, LBV/IIns

- AGN/ Blazars/tidal events

- Stars: CVs, AM CVns, flare stars, eclipsing stars/planets

Stellar Mergers: A New Start

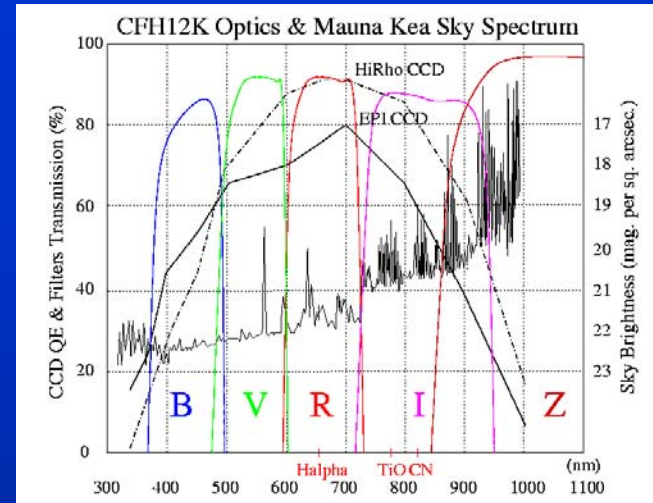

M85 Transient

Keck-I : Feb 03, 2006

The PTF camera

There is nothing like searching, if you want to find something.

You usually find something, if you search,

but it is not always quite the something you were after.

Timeline

Data management

Basic input: the SNF rate

Based on Oct. 2006 data:

25 rising SNe above 20 mag at peak in 2,200 deg²

i.e., 0.011 SN/deg²

Of those: 20 Ia, 2 II_n, 2 Ib/c, 1 II (P?)

80% Ia is consistent with other works

(e.g. WOOTTS, Gal-Yam et al. 2007 in prep. 4/5)

Sky coverage

Integration: ~120s, readout+slew: 30s, 150s total per field

20 fields per hour

2 images per field (asteroids)

70% weather, 80% PTF time

Depth similar to SNF

Expected SN yield

So:

For the 1/9 (SN) component: 20 field/hour

= 140 deg² / hour

= 350 deg² / night

= 3150 deg² / month

X 0.7 x 0.8 = 1764 deg² / month

Which, assuming 0.011 rising SN/ deg²

= 20 rising SNe / month above 20 mag

Expected SN yield

Which, assuming 0.011 rising SN/ deg²
= 20 rising SNe / month above 20 mag

Of which ~16 cosmology-grade SNe Ia

~ 4 core-collapse SNe

(perhaps 1-2 II_n, 1-2 Ib/c, 1-2 II)

Expect x2 more including fainter + declining events

Thanks
