## BEYOND UNIVERSALITY? P-WAVE INTERACTIONS IN HALO NUCLEI

## Daniel Phillips

Institute of Nuclear and Particle Physics
Department of Physics and Astronomy Ohio University, Athens, Ohio

Research supported by the US Department of Energy

## Outline

- A one-slide review of p-waves
- p-wave amplitudes in Halo EFT
- How universal are electromagnetic processes with p-wave states?
- Three bodies: Efimov effect? Remnant thereof?
- Outstanding issues

## Outline

- A one-slide review of p-waves
- p-wave amplitudes in Halo EFT
- How universal are electromagnetic processes with p-wave states?

Beryllium-11

- Three bodies: Efimov effect? Remnant thereof?

Helium-6

- Outstanding issues

## One-slide p-wave review

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{m_{R}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}-i k^{3}}
$$

## One-slide p-wave review

- For a short-ranged potential, if $k R \ll 1$ :

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{m_{R}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}-i k^{3}}
$$

## One-slide p-wave review

- For a short-ranged potential, if $k R \ll I$ :

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{m_{R}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}-i k^{3}}
$$

- "Natural case" $a_{1} \sim R^{3} ; r_{1} \sim I / R . \Rightarrow t_{1} \sim R^{3} k^{2}$, so small cf. $t_{0} \sim I / k\left(N^{3} L O\right)$

## One-slide p-wave review

- For a short-ranged potential, if $k R \ll I$ :

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{m_{R}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}-i k^{3}}
$$

- "Natural case" $a_{1} \sim R^{3} ; r_{1} \sim I / R . \Rightarrow t_{1} \sim R^{3} k^{2}$, so small cf. $t_{0} \sim I / k\left(N^{3} L O\right)$
- But what if there is a low-energy p-wave resonance?

## One-slide p-wave review

- For a short-ranged potential, if $k R \ll 1$ :

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{m_{R}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}-i k^{3}}
$$

- "Natural case" $a_{1} \sim R^{3} ; r_{1} \sim I / R . \Rightarrow t_{1} \sim R^{3} k^{2}$, so small cf. $t_{0} \sim I / k\left(N^{3} L O\right)$
- But what if there is a low-energy p-wave resonance?
- Causality says $r_{1} \leqslant-I / R$

Wigner (1955); Hammer \& Lee (2009); Nishida (2012)

## One-slide p-wave review

- For a short-ranged potential, if $k R \ll 1$ :

$$
\begin{equation*}
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{m_{R}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}-i k^{3}} \tag{1949}
\end{equation*}
$$

- "Natural case" $a_{1} \sim R^{3} ; r_{1} \sim I / R . \Rightarrow t_{1} \sim R^{3} k^{2}$, so small cf. $t_{0} \sim I / k\left(N^{3} L O\right)$
- But what if there is a low-energy p-wave resonance?
- Causality says $r_{1} \leqslant-I / R$

Wigner (1955); Hammer \& Lee (2009); Nishida (2012)

- So low-energy resonance/bound state would seem to have to arise due to cancellation between $-\mathrm{I} / \mathrm{a}$ । and $\mathrm{I} / 2 \mathrm{r}, \mathrm{k}^{2}$ terms.
- $a_{l} \sim R / M_{10}{ }^{2}$ gives $k_{R} \sim M_{l o}$

## Lagrangian for s- and p-wave states

$$
\begin{aligned}
\mathcal{L}= & c^{\dagger}\left(i \partial_{t}+\frac{\nabla^{2}}{2 M}\right) c+n^{\dagger}\left(i \partial_{t}+\frac{\nabla^{2}}{2 m}\right) n \\
& +\sigma^{\dagger}\left[\eta_{0}\left(i \partial_{t}+\frac{\nabla^{2}}{2 M_{n c}}\right)+\Delta_{0}\right] \sigma+\pi_{j}^{\dagger}\left[\eta_{1}\left(i \partial_{t}+\frac{\nabla^{2}}{2 M_{n c}}\right)+\Delta_{1}\right] \pi_{j} \\
& -g_{0}\left[\sigma n^{\dagger} c^{\dagger}+\sigma^{\dagger} n c\right]-\frac{g_{1}}{2}\left[\pi_{j}^{\dagger}\left(n i \overleftrightarrow{\nabla}_{j} c\right)+\left(c^{\dagger} i \overleftrightarrow{\nabla}_{j} n^{\dagger}\right) \pi_{j}\right] \\
& -\frac{g_{1}}{2} \frac{M-m}{M_{n c}}\left[\pi_{j}^{\dagger} i \vec{\nabla}_{j}(n c)-i \overleftrightarrow{\nabla}_{j}\left(n^{\dagger} c^{\dagger}\right) \pi_{j}\right]+\ldots,
\end{aligned}
$$

- c, n:"core","neutron" fields. c: boson, n: fermion
- $\sigma, \pi_{j}: S$-wave and $P$-wave fields
- Minimal substitution generates leading EM couplings

## Dressing the $p$-wave state

Bertulani, Hammer, van Kolck (2002); Bedaque, Hammer, van Kolck (2003)

- Proceed similarly for p-wave state as for s-wave state

- Here both $\Delta_{I}$ and $g_{I}$ are mandatory for renormalization at LO

$$
\Sigma_{\pi}(p)=-\frac{m_{R} g_{1}^{2} k^{2}}{6 \pi}\left[\frac{3}{2} \mu+i k\right]
$$

- Reproduces ERE. But here (cf. s waves) cannot take $\mathrm{r}_{\mathrm{l}}=0$ at LO

## Dressing the p -wave state

Bertulani, Hammer, van Kolck (2002); Bedaque, Hammer, van Kolck (2003)

- Proceed similarly for $p$-wave state as for s-wave state

- Here both $\Delta_{I}$ and $g_{I}$ are mandatory for renormalization at LO

$$
\Sigma_{\pi}(p)=-\frac{m_{R} g_{1}^{2} k^{2}}{6 \pi}\left[\frac{3}{2} \mu+i k\right]
$$

- Reproduces ERE. But here (cf. s waves) cannot take $r_{1}=0$ at LO
- If $a_{\mid}>0$ then pole is at $k=i \gamma_{।}$ with $B_{I}=\gamma_{1}{ }^{2 /\left(2 m_{R}\right)}$ :

$$
D_{\pi}(p)=-\frac{3 \pi}{m_{R}^{2} g_{1}^{2}} \frac{2}{r_{1}+3 \gamma_{1}} \frac{i}{p_{0}-\mathbf{p}^{2} /\left(2 M_{n c}\right)+B_{1}}+\text { regular }
$$

## Semi-universal narrow p-wave resonance

Bertulani, Hammer, van Kolck (2002)

Bedaque, Hammer, van Kolck (2003)

## Semi-universal narrow p-wave resonance

- First EFT paper to do this assigned $\mathrm{a}_{1} \sim \mathrm{I} / \mathrm{M}_{10}{ }^{3}$; $r_{1} \sim \mathrm{M}_{10}$ Bertulani, Hammer, van Kolck (2002)
- Here we adopt $\mathrm{r}_{1} \sim \mathrm{I} / \mathrm{R}, \mathrm{a}_{1} \sim \mathrm{M}_{10}{ }^{2} / \mathrm{R}$

## Semi-universal narrow p-wave resonance

- First EFT paper to do this assigned $\mathrm{a}_{1} \sim \mathrm{I} / \mathrm{M}_{10}{ }^{3} ; r_{1 \sim} M_{l \circ}$ Bertulani, Hammer, van Kolck (2002)
- Here we adopt $r_{1} \sim I / R, a_{1} \sim M_{10}{ }^{2} / R$ Bedaque, Hammer, van Kolck (2003)
- So, off resonance, $\operatorname{Re}\left[t^{-1}\right]>\operatorname{Im}\left[t^{-1}\right]$ : phase shifts are $O\left(M_{\circ} R\right)$ and scattering is perturbative away from resonance
cf. Pascalutsa, DP (2003)

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{12 \pi}{m_{R} r_{1}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{2}-k_{R}^{2}} \quad k_{R}^{2}=\frac{2}{a_{1} r_{1}}
$$

## Semi-universal narrow p-wave resonance

- First EFT paper to do this assigned $\mathrm{a}_{\mathrm{I}} \sim \mathrm{I} / \mathrm{M}_{10}{ }^{3} ; r_{1} \sim M_{10}$ Bertulani, Hammer, van Kolck (2002)
- Here we adopt $r_{1} \sim I / R, a_{1} \sim M_{10}{ }^{2} / R$ Bedaque, Hammer, van Kolck (2003)
- So, off resonance, $\operatorname{Re}\left[t^{-1}\right]>\operatorname{Im}\left[t^{-1}\right]$ : phase shifts are $O\left(M_{10} R\right)$ and scattering is perturbative away from resonance cf. Pascalutsa, DP (2003)

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{12 \pi}{m_{R} r_{1}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{2}-k_{R}^{2}} \quad k_{R}^{2}=\frac{2}{a_{1} r_{1}}
$$

- And then take $\mathrm{k}_{\mathrm{R}} \rightarrow 0$ to obtain

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{12 \pi}{m_{R} r_{1}} \hat{k} \cdot \hat{k^{\prime}}
$$

Harada et al. (2009)
As universal as it gets for p-waves?

## Semi-universal narrow p-wave resonance

- First EFT paper to do this assigned $\mathrm{a}_{\mathrm{I}} \sim \mathrm{I} / \mathrm{M}_{10}{ }^{3} ; r_{1} \sim M_{10}$ Bertulani, Hammer, van Kolck (2002)
- Here we adopt $r_{1} \sim I / R, a_{1} \sim M_{10}{ }^{2} / R$ Bedaque, Hammer, van Kolck (2003)
- So, off resonance, $\operatorname{Re}\left[t^{-1}\right]>\operatorname{Im}\left[t^{-1}\right]$ : phase shifts are $O\left(M_{\circ} R\right)$ and scattering is perturbative away from resonance cf. Pascalutsa, DP (2003)

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{12 \pi}{m_{R} r_{1}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{2}-k_{R}^{2}} \quad k_{R}^{2}=\frac{2}{a_{1} r_{1}}
$$

- And then take $\mathrm{k}_{\mathrm{R}} \rightarrow 0$ to obtain

$$
\langle\mathbf{k}| t_{1}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{12 \pi}{m_{R} r_{1}} \hat{k} \cdot \hat{k^{\prime}}
$$

Harada et al. (2009)
As universal as it gets for p-waves?

- Resonance width is $\sim E_{R} k_{R} / r_{1}$, so it is parametrically narrow. Need to resum width if $k^{2}-k_{R}{ }^{2}$ gets small

## p-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}-i k^{3}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

## p-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}-i k^{3}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

Two possibilities:

$$
\begin{array}{ll}
\text { 1. } & a_{1} \sim I / M_{10}{ }^{3}, r_{1 \sim} \sim M_{10} \\
\text { 2. } & a_{1} \sim R / M_{10}{ }^{2}, r_{1 \sim} / / R
\end{array}
$$

## p-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}-i k^{3}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

Two possibilities:

$$
\begin{aligned}
& \text { 1. } a_{1 \sim} / / M_{10}{ }^{3}, r_{1} \sim M_{10} \\
& \text { 2. } a_{1 \sim R} / M_{10}{ }^{2}, r_{1 \sim} \sim / R
\end{aligned}
$$

${ }^{5} \mathrm{He}: \mathrm{a}_{1}=-62.951 \mathrm{fm}^{3} ; \mathrm{r}_{1}=-0.881 \mathrm{fm}^{-1}$ Arndt, Long, Roper (1973)

## P-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}-i k^{3}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

Two possibilities:

$$
\begin{aligned}
& \text { 1. } a_{1 \sim} / / M_{10}{ }^{3}, r_{1} \sim M_{10} \\
& \text { 2. } a_{1 \sim R} / M_{10}{ }^{2}, r_{1 \sim I} / R
\end{aligned}
$$

${ }^{5} \mathrm{He}: \mathrm{a}_{1}=-62.951 \mathrm{fm}^{3} ; \mathrm{r}_{1}=-0.881 \mathrm{fm}^{-1}$ Arndt, Long, Roper (1973)

## p-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}-i k^{3}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

Two possibilities:

$$
\begin{aligned}
& \text { 1. } a_{1 \sim} / / M_{10}{ }^{3}, r_{1} \sim M_{10} \\
& \text { 2. } a_{1 \sim R} M_{10}{ }^{2}, r_{1 \sim I} / R
\end{aligned}
$$

${ }^{5} \mathrm{He}: a_{1}=-62.951 \mathrm{fm}^{3} ; r_{1}=-0.881 \mathrm{fm}^{-1}$

## p-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}-i k^{3}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

Two possibilities:

$$
\begin{aligned}
& a_{1 \sim} / / M_{10}{ }^{3}, r_{1} \sim M_{10} \\
& a_{1} \sim R / M_{10}{ }^{2}, r_{1 \sim} \sim 1 / R
\end{aligned}
$$

Pole at $\mathrm{k}=\mathrm{i} \gamma_{\mathrm{I}} \approx-\mathrm{ir} / 2 \sim \mathrm{I} / \mathrm{R}$
${ }^{5} \mathrm{He}: \mathrm{a}_{1}=-62.951 \mathrm{fm}^{3} ; \mathrm{r}_{1}=-0.881 \mathrm{fm}^{-1}$

## p-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}-i k^{3}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

Two possibilities:

$$
\begin{aligned}
& \text { 1. } a_{1 \sim} / / M_{10}{ }^{3}, r_{1} \sim M_{10} \\
& \text { 2. } a_{1 \sim R} M_{10}^{2}, r_{1 \sim} \sim / R
\end{aligned}
$$

Pole at $\mathrm{k}=\mathrm{i} \gamma_{\mathrm{I}} \approx-\mathrm{ir} / \mathrm{r}_{1} \sim \mathrm{I} / \mathrm{R}$
Deep bound state
${ }^{5} \mathrm{He}: \mathrm{a}_{1}=-62.951 \mathrm{fm}^{3} ; \mathrm{r}_{1}=-0.881 \mathrm{fm}^{-1}$

## p-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}-i k^{3}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

Two possibilities:

$$
\begin{aligned}
& \text { 1. } a_{1 \sim I} / M_{10}{ }^{3}, r_{1 \sim} M_{10} \\
& \text { 2. } a_{1 \sim R} / M_{10}{ }^{2}, r_{1 \sim I} / R
\end{aligned}
$$

${ }^{5} \mathrm{He}: \mathrm{a}_{1}=-62.951 \mathrm{fm}^{3} ; \mathrm{r}_{1}=-0.881 \mathrm{fm}^{-1}$

Pole at $\mathrm{k}=\mathrm{i} \gamma_{1} \approx-\mathrm{ir} / 2 \sim \mathrm{I} / \mathrm{R}$
Deep bound state

Poles at $\mathrm{k}= \pm \mathrm{k}_{\mathrm{R}}-\mathrm{i} \mathrm{k}_{\mathrm{R}}{ }^{2} /\left(2 \gamma_{\mathrm{I}}\right)+\mathrm{O}\left(\mathrm{R}^{2} \mathrm{Mb}^{3}\right) \sim \mathrm{I} / \mathrm{R}_{\text {halo }}$
Narrow resonance

## p-wave pole positions, e.g., ${ }^{5} \mathrm{He}$

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{k^{3} \cot \delta_{1}} \quad k^{3} \cot \delta_{1}=-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}
$$

Two possibilities:

$$
\begin{aligned}
& a_{1 \sim} / / M_{10}{ }^{3}, r_{1} \sim M_{10} \\
& a_{1} \sim R / M_{10}{ }^{2}, r_{1 \sim} \sim / / R
\end{aligned}
$$

Pole at $\mathrm{k}=\mathrm{i} \gamma_{1} \approx-\mathrm{ir} / 2 \sim \mathrm{I} / \mathrm{R}$
Deep bound state

Poles at $\mathrm{k}= \pm \mathrm{k}_{\mathrm{R}}-\mathrm{ik}_{\mathrm{R}}{ }^{2} /\left(2 \gamma_{\mathrm{I}}\right)+\mathrm{O}\left(\mathrm{R}^{2} \mathrm{M}_{\mathrm{lo}}{ }^{3}\right) \sim \mathrm{I} / \mathrm{R}_{\text {halo }}$
Narrow resonance

Arndt, Long, Roper (1973)

## Application to ${ }^{5} \mathrm{He}$

adapted from Bedaque, Hammer, van Kolck (2003)

- Data on neutron- ${ }^{4} \mathrm{He}$ scattering
- Note role of s-wave contributions near threshold. They're $\sim R$ in amplitude and taken as NLO here
- Red: resummed (needed near resonance)
- Black: not resummed

## El transitions: $\gamma_{\mathrm{EI}}+{ }^{11} \mathrm{Be} \rightarrow{ }^{1 I} \mathrm{Be}^{*}$

- ${ }^{11} \mathrm{Be}: ~ I / 2^{+}$(s-wave) state bound by 504 keV , I/2- (p-wave) state bound by 184 keV
- I/2- bound state:"on resonance": two parameters at LO, $\gamma_{\text {I }}$ and $r_{1}$
${ }^{11} \mathrm{Be}$
http://www.uni-mainz.de

## El transitions: $\gamma_{\mathrm{EI}}+{ }^{11} \mathrm{Be} \rightarrow{ }^{I} \mathrm{Be}^{*}$

- ${ }^{11} \mathrm{Be}: ~ I / 2^{+}$(s-wave) state bound by 504 keV , I/2- (p-wave) state bound by 184 keV
- I/2-bound state:"on resonance": two parameters at LO, $\gamma_{1}$ and $r_{1}$
${ }^{11} \mathrm{Be}$
http://www.uni-mainz.de
- LO prediction for $B(\mathrm{E} 1)=\frac{m_{R}^{2} Q_{c}^{2} e^{2}}{3 \pi M^{2}} \frac{\gamma_{0}}{-r_{1}}\left[\frac{2 \gamma_{1}+\gamma_{0}}{\left(\gamma_{0}+\gamma_{1}\right)^{2}}\right]^{2}$

Typel \& Baur (2004, 2005, 2008); Hammer \& DP (2011)

## El transitions: $\gamma_{\mathrm{EI}}+{ }^{11} \mathrm{Be} \rightarrow{ }^{I} \mathrm{Be}^{*}$

- ${ }^{11} \mathrm{Be}: ~ \mathrm{I} / 2^{+}$(s-wave) state bound by 504 keV , I/2- (p-wave) state bound by 184 keV
- I/2- bound state:"on resonance": two parameters at LO, $\gamma_{1}$ and $r_{1}$
${ }^{11} \mathrm{Be}$
http://www.uni-mainz.de
- LO prediction for $B(\mathrm{E} 1)=\frac{m_{R}^{2} Q_{c}^{2} e^{2}}{3 \pi M^{2}} \frac{\gamma_{0}}{-r_{1}}\left[\frac{2 \gamma_{1}+\gamma_{0}}{\left(\gamma_{0}+\gamma_{1}\right)^{2}}\right]^{2}$

Typel \& Baur (2004, 2005, 2008); Hammer \& DP (2011)

- Universal relation $\mathrm{B}(\mathrm{E} 1)=\frac{2 e^{2} Q_{c}^{2}}{15 \pi}\left\langle r_{E}^{2}\right\rangle x\left[\frac{1+2 x}{(1+x)^{2}}\right]^{2} ; x=\sqrt{\frac{B_{1}}{B_{0}}}$

## EI transitions: $\gamma \mathrm{EI}+{ }^{I I} \mathrm{Be} \rightarrow{ }^{I I} \mathrm{Be}^{*}$

- ${ }^{11} \mathrm{Be}: ~ \mathrm{I} / 2^{+}$(s-wave) state bound by 504 keV , I/2- (p-wave) state bound by 184 keV

http://www.uni-mainz.de
- $L O$ prediction for $B(\mathrm{E} 1)=\frac{m_{R}^{2} Q_{c}^{2} e^{2}}{3 \pi M^{2}} \frac{\gamma_{0}}{-r_{1}}\left[\frac{2 \gamma_{1}+\gamma_{0}}{\left(\gamma_{0}+\gamma_{1}\right)^{2}}\right]^{2}$

Typel \& Baur (2004, 2005, 2008); Hammer \& DP (2011)
Universal relation $\mathrm{B}(\mathrm{E} 1)=\frac{2 e^{2} Q_{c}^{2}}{15 \pi}\left\langle r_{E}^{2}\right\rangle x\left[\frac{1+2 x}{(1+x)^{2}}\right]^{2} ; x=\sqrt{\frac{B_{1}}{B_{0}}}$
Predictions for $\gamma_{E I}+{ }^{11} \mathrm{Be} \rightarrow{ }^{10} \mathrm{Be}+\mathrm{n}$ : there p -waves perturbative;
Calculations of $p+{ }^{7} \mathrm{Be} \rightarrow{ }^{8} \mathrm{~B}+\mathrm{p} \quad$ Zhang, Nollett, DP (2014, 2015); Ryberg et al. (2015)

## ${ }^{6} \mathrm{He}$ as a 2 n halo

http://www.anl.gov

## ${ }^{6} \mathrm{He}$ as a 2 n halo

- $R \approx 1.5 \mathrm{fm} ; \mathrm{M}_{10} \approx 40 \mathrm{MeV}$

## ${ }^{6} \mathrm{He}$ as a 2 n halo

- $R \approx 1.5 \mathrm{fm} ; \mathrm{M}_{10} \approx 40 \mathrm{MeV}$
- ${ }^{4} \mathrm{He}-\mathrm{n}$ interaction: ${ }^{2} \mathrm{P}_{3 / 2}$ resonance

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}}
$$

## ${ }^{6} \mathrm{He}$ as a 2 n halo

- $R \approx 1.5 \mathrm{fm} ; M_{10} \approx 40 \mathrm{MeV}$
- ${ }^{4} \mathrm{He}-\mathrm{n}$ interaction: ${ }^{2} \mathrm{P}_{3 / 2}$ resonance

$$
\langle\mathbf{k}| t_{n \alpha}\left|\mathbf{k}^{\prime}\right\rangle=-\frac{6 \pi}{\mu_{n \alpha}} \frac{\mathbf{k} \cdot \mathbf{k}^{\prime}}{-\frac{1}{a_{1}}+\frac{1}{2} r_{1} k^{2}}
$$

- "Standard" counting for nn: $\mathrm{a}_{0}$ at leading order, $\mathrm{r}_{0}$ at NLO
- ${ }^{2} P_{3 / 2}$ : at NLO unitarity piece/width included perturbatively
- ${ }^{2} S_{1 / 2}$ : NLO effect: $a_{0}=2.46 \mathrm{fm}$ is "natural"
- p-wave power counting only valid when not near the ${ }^{2} P_{3 / 2}$ resonance
- ${ }^{2} \mathrm{P}_{1 / 2}$ resonance?

## "STM" equation for ${ }^{6} \mathrm{He}$

## "STM" equation for ${ }^{6} \mathrm{He}$

- No longer just "s-wave" exchanges: $Q_{0}, Q_{1}$, and $Q_{2}$ enter in exchange kernel
- Asymptotic behavior stems from first term on right-hand side

## "STM" equation for ${ }^{6} \mathrm{He}$

- No longer just "s-wave" exchanges: $Q_{0}, Q_{1}$, and $Q_{2}$ enter in exchange kernel
- Asymptotic behavior stems from first term on right-hand side
- No Efimov effect (not scale invariant: $r$ । present in asymptotic analysis)

Jona-Lasinio, Pricoupenko, Castin (2008); Braaten, Hagen, Hammer, Platter (2011)

## "STM" equation for ${ }^{6} \mathrm{He}$

## Renormalizing ${ }^{6} \mathrm{He}$

## Renormalizing ${ }^{6} \mathrm{He}$

## ${ }^{6} \mathrm{He}$ matter radius

Ji, Elster, DP (in preparation)

Energy-dependent potential already at leading order unless unitarity/width treated perturbatively $\rightarrow$ not as simple as just "get wave function and use quantum mechanics"

## ${ }^{6} \mathrm{He}$ matter radius

## Helium-6 matter radius as a function of $B$

Energy-dependent potential already at leading order unless unitarity/width treated perturbatively $\rightarrow$ not as simple as just "get wave function and use quantum mechanics"

## Implications: ${ }^{6} \mathrm{He}$ calculation

## Implications: ${ }^{6} \mathrm{He}$ calculation

- Can't predict B for ${ }^{6} \mathrm{He} 0^{+}$ground state from nn and ${ }^{5} \mathrm{He}$ input alone
- Properties will be strongly correlated with $S_{2 n}$. What about $k_{R}$ and $r_{1}$ ?

Universality?

## Implications: ${ }^{6} \mathrm{He}$ calculation

- Can't predict B for ${ }^{6} \mathrm{He} 0^{+}$ground state from nn and ${ }^{5} \mathrm{He}$ input alone
- Properties will be strongly correlated with $\mathrm{S}_{2 \mathrm{n}}$. What about $\mathrm{k}_{\mathrm{R}}$ and $\mathrm{r}_{\mathrm{l}}$ ?
- No Efimov effect. But perhaps a remnant (see $\mathrm{H}_{0}$ plot)

## Implications: ${ }^{6} \mathrm{He}$ calculation

- Can't predict B for ${ }^{6} \mathrm{He} 0^{+}$ground state from nn and ${ }^{5} \mathrm{He}$ input alone
- Properties will be strongly correlated with $\mathrm{S}_{2 \mathrm{n}}$. What about $\mathrm{k}_{\mathrm{R}}$ and $\mathrm{r}_{\mathrm{l}}$ ?

Universality?

- No Efimov effect. But perhaps a remnant (see $\mathrm{H}_{0}$ plot)
- Does same three-body force enter $2^{+}$?. Or no three-body force?
- (Need to fully treat ${ }^{5} \mathrm{He}$ resonances in three-body resonance regime)

## Implications: ${ }^{6} \mathrm{He}$ calculation

- Impact of short-distance operators at higher orders in EFT expansion? Helpful to have asymptotic form of "STM" solution

## Some (crisp?) questions

## Some (crisp?) questions

- p -waves are less universal than s-waves:
- No scale-free two-body amplitude
- Short-distance physics enters earlier in other observables too
- No (obvious) way to achieve Efimov effect in 3B systems

## Some (crisp?) questions

- p-waves are less universal than s-waves:
- No scale-free two-body amplitude
- Short-distance physics enters earlier in other observables too
- No (obvious) way to achieve Efimov effect in 3B systems

## BUT THAT DOESN'T MAKE THEM NON-UNIVERSAL! OR NON-INTERESTING!

## Some (crisp?) questions

- p-waves are less universal than s-waves:
- No scale-free two-body amplitude
- Short-distance physics enters earlier in other observables too
- No (obvious) way to achieve Efimov effect in 3B systems

## BUT THAT DOESN'T MAKE THEM NON-UNIVERSAL! OR NON-INTERESTING!

- What do 3B states bound by low-energy 2B p-wave resonances look like? Is there a remnant of the Efimov effect there? (Or more...)

## Some (crisp?) questions

- p-waves are less universal than s-waves:
- No scale-free two-body amplitude
- Short-distance physics enters earlier in other observables too
- No (obvious) way to achieve Efimov effect in 3B systems

## BUT THAT DOESN'T MAKE THEM NON-UNIVERSAL! OR NON-INTERESTING!

- What do 3B states bound by low-energy 2B p-wave resonances look like? Is there a remnant of the Efimov effect there? (Or more...)
- Are there p-wave-state observables where the state's asymptotic properties (ANC and binding energy) determine more than just LO?

## Some (crisp?) questions

- Are there p-wave-state observables where the state's asymptotic properties (ANC and binding energy) determine more than just LO?
- What about higher partial waves?

Backup slides: Coulomb dissociation

## Coulomb dissociation: result

Data: Palit et al., 2003
Analysis: Hammer, Phillips. NPA, 2011

- Reasonable convergence
- Information on value of ro through fitting of $\mathrm{A}_{0}$ :

$$
r_{0}=2.7 \mathrm{fm}
$$

Need P-wave effective range

- Here value of $r_{1}$ used to fit $B\left(E 1: 1 / 2^{+} \rightarrow 1 / 2^{-}\right)$works.

$$
r_{1}=-0.66 \mathrm{fm}^{-1}
$$

NLO: $\left(\left\langle r_{\mathrm{c}}{ }^{2}\right\rangle+\left\langle\mathrm{rBe}^{2}\right\rangle\right)^{1 / 2}=2.44 \mathrm{fm}$
